

cities around the capabilities, and to strengthen the relationship that may exist between cities in the same country.

### 3. Outlook

The Capacity and capability building programme develops through continuous improvement cycles with the cities, always seeking to offer what best suits their needs. Therefore, beyond the plan outlined in this document, it is important to note that as facilitators, we must be flexible in the face of changes that may occur in the future within the framework of the project.

Ideally, the NetZeroCities portal will increasingly better host the learning resources offered to cities, seeking to make this experience as accessible, user-friendly and simple as possible, including support in European languages. According to the needs of the cities and the City Support Groups, new forms of training can be established. At the same time, from this work group, we are always attentive to what is developed in other work packages, with the objective of taking advantage of and integrating the work done by other colleagues in the consortium.
